Chennai - 600044

Case Sheet Summary

||| |||| || |||||||| ||||

Name	Mr. Rajesh Verma	Patient No.	N/A
Gender	Male	Doctor	Dr. Anita Rao, MD
Age	58 years	Date	2026-07-11

Chief Complaints : Knee pain and headaches

Vitals : Blood pressure: 148/92 mmHg, Heart rate: 78 bpm

Examination : Findings : Mild swelling of the left knee, no significant redness or warmth in knees, decent range of motion with some discomfort on flexion, mild crepitus in both knees.

Investigation : Basic metabolic panel (BMP) to check kidney function and potassium levels.

Diagnosis : Knee pain (bilateral), Elevated blood pressure (uncontrolled), Tension-type headaches (suspected)

Prescription :

#	Medicine	Dosage	Duration
1	Paracetamol	500mg-650mg, 3-4 times daily	Until follow-up (2 weeks)

Treatment Plan : Stop Ibuprofen and potassium supplement. Initiate scheduled Paracetamol. Monitor blood pressure and kidney function via BMP. Follow-up in 2 weeks.

Therapy

Description	Result
None	N/A

Notes

Patient's elevated blood pressure (148/92 mmHg) is likely exacerbated by regular Ibuprofen use and potential interaction with Losartan and potassium supplement.

Instructions : Stop Ibuprofen and potassium supplement immediately. Take Paracetamol 500mg-650mg, 3-4 times daily (scheduled). Do not combine Paracetamol with other cold/flu products containing acetaminophen. Call clinic immediately if headaches worsen, are accompanied by fever, or if vision changes occur. Return in 2 weeks.
