Chennai - 600044

Case Sheet Summary

||| |||| || |||||||| ||||

Name	Mr. Rajesh Verma	Patient No.	RV-58-20260711
Gender	Male	Doctor	Dr. Anita Rao, MD
Age	58 years	Date	2026-07-11

Chief Complaints : Knee pain and headaches

Vitals : BP: 148/92 mmHg, Pulse: 78 bpm

Examination : Findings : Mild swelling of the left knee, no significant redness or warmth in knees, decent range of motion with some discomfort on flexion, mild crepitus in both knees.

Investigation : Basic metabolic panel (BMP) to check kidney function and potassium levels.

Diagnosis : Knee pain (bilateral), Elevated blood pressure (uncontrolled), Tension-type headaches (suspected)

Prescription :

#	Medicine	Dosage	Duration
1	Paracetamol	500mg-650mg, 3-4 times daily (scheduled)	Scheduled -up (2 weeks)

Treatment Plan : Stop Ibuprofen and potassium supplement. Start scheduled Paracetamol. Monitor blood pressure and kidney function via BMP. Follow-up in 2 weeks.

Therapy

Description	Result
None	N/A

Notes

Patient has been taking Ibuprofen 400mg 2-3 times daily for 5-6 days/week for the last 2 weeks, which is likely contributing to elevated blood pressure and potential kidney strain when combined with Losartan and potassium supplements.

Instructions : Do not combine Paracetamol with other cold/flu products containing acetaminophen due to liver risk. Call clinic immediately if headaches worsen, are accompanied by fever, or if vision changes occur. Stop regular Ibuprofen use to improve blood pressure control and reduce kidney strain. Stop potassium supplement to avoid dangerous hyperkalemia risk with Losartan. Return in 2 weeks.
